SUMMARY

Product-oriented Software Engineer with experience building and maintaining cross-platform mobile and web applications across retail technology, POS systems, logistics, and smart farming platforms. Experienced in Flutter, Django, REST API integration, UI/UX design, mobile deployment, and feature ownership from requirement gathering to production release.

Strong background in developing business-critical systems including retail workforce management platforms, POS ecosystems, delivery solutions, and IoT-integrated farming applications. Comfortable collaborating across product, backend, and engineering teams while driving feature implementation, testing, deployment, and ongoing production support.

EDUCATION

Multimedia University

Bachelor of Information Technology, Minor in Security Technology, CGPA: 3.93

EXPERIENCE

Mobile Application Specialist

Mar 2025 – Aug 2026

Always Marketing (M) Sdn. Bhd. *Kuala Lumpur, Malaysia*

- Led feature development and enhancement for RetailAIM+, a retail workforce management platform used by merchandisers and promoters for daily operational workflows.
- Designed and implemented new mobile application features including Proof of Delivery (POD), order picking workflows, leave management systems, offline functionality, and push notification services.
- Collaborated with backend teams integrating Flutter frontend applications with .NET REST APIs to support scalable retail operations.
- Managed end-to-end mobile release cycles including testing, debugging, deployment, and maintenance for both Apple App Store and Google Play Store.
- Conducted UI/UX design and feature prototyping using Figma to improve workflow usability and operational efficiency.
- Provided production support, customer issue investigation, and bug fixing for live enterprise retail systems.
- Coordinated requirement gathering, feature planning, testing activities, and implementation timelines across development teams.
- Successfully migrated legacy Ionic application features into a modern Flutter-based architecture.

Programmer

Jul 2024 – Oct 2024

Aptsys Pte. Ltd. *Singapore*

- Developed Jade2.0, a cross-platform POS ecosystem supporting traditional POS terminals, iPads, handheld Android POS devices, self-order kiosks, and kitchen display systems.
- Enhanced application responsiveness across multiple screen sizes and hardware configurations.
- Collaborated with Android POS hardware suppliers to support new device integrations and deployment compatibility.
- Developed Flutter frontend components and Android-native integrations for POS hardware support and peripheral compatibility.

Software Engineer

Aug 2022 – Mar 2024

iRadar Sdn. Bhd. *Malacca, Malaysia*

- Developed and maintained GoTani, a smart farming platform integrating drone mapping, IoT sensors, AI-based tree recognition, and hyperspectral imaging technologies.
- Developed backend APIs using Django and implemented frontend/mobile features using Flutter and JavaScript.
- Collaborated with engineering teams on automated irrigation system workflows and farm monitoring solutions.
- Participated in requirement gathering, feature planning, testing, and deployment activities across multiple projects.

PROJECTS

RetailAIM+

- Developed operational modules supporting workforce scheduling, outlet visits, attendance tracking, AI-assisted product recognition workflows, and retail task execution.
- Implemented Proof of Delivery and order picking systems to improve operational tracking and fulfillment workflows.
- Successfully completed migration of all major legacy application features into Flutter platform.

R2Home

- Contributed to the design and implementation of a neighbourhood delivery ecosystem integrating promoter workflows with customer-facing commerce applications.
- Developed promoter-side product management workflows enabling daily product image uploads, price updates, and online campaign activation.
- Supported successful production launch and onboarding of participating retailers.

Jade2.0

- Improved multi-device usability by transitioning the platform from an iPad-only environment to a responsive multi-platform architecture.
- Implemented dual-screen POS support for enhanced cashier and customer interaction workflows.

GoTani

- Built informative farm analytics dashboards by analyzing operational and sensor data from production databases.
- Revamped UI/UX experiences across web and mobile platforms to improve usability and data visualization.

ERP

- Contributed to the design and implementation of procurement system in company internal ERP system.
- Automated the PO and DO generation by following the standard procedure from the management to improve productivity and minimize human error.

TECHNICAL SKILLS

Flutter
Dart
Django
Python
React
JavaScript
HTML5
CSS3
.NET API Integration
Cross-Platform Application Development
Mobile Application Development
RESTful API Integration
Offline Synchronization
Push Notifications

App Store Deployment
Play Store Deployment
Responsive UI Development
UI/UX Design
Figma
Wireframing
Feature Prototyping
User Flow Design
Product Enhancement
Git
Firebase
MySQL
REST API
Agile Development
Production Support
Bug Fixing & Troubleshooting
