SUMMARY

Product-oriented Software Engineer with experience building and maintaining cross-platform mobile and web applications across retail technology, POS systems, logistics, and smart farming platforms. Experienced in Flutter, Django, .NET Web API, Microsoft SQL Server, REST API integration, UI/UX design, mobile deployment, and feature ownership from requirement gathering to production release.

Strong background in developing business-critical systems including retail workforce management platforms, POS ecosystems, delivery solutions, and IoT-integrated farming applications. Comfortable collaborating across product, backend, and engineering teams while driving feature implementation, testing, deployment, and ongoing production support, with AI-assisted development tools (Claude Code, GitHub Copilot) as part of the daily workflow.

EDUCATION

Multimedia University **Apr 2018 – Jul 2022**
Bachelor of Information Technology, Minor in Security Technology | *CGPA: 3.93*

EXPERIENCE

Mobile Application Specialist **Mar 2025 – Aug 2026**
Always Marketing (M) Sdn. Bhd. *Kuala Lumpur, Malaysia*

- Led feature development and enhancement for RetailAIM+, a retail workforce management platform used daily by 500+ active merchandisers and promoters.
- Designed and implemented new mobile application features including Proof of Delivery (POD), order picking workflows, leave management systems, offline functionality, and push notification services.
- Built .NET REST APIs (C#, Entity Framework) for the mobile app backend and integrated them with the Flutter frontend to support scalable retail operations.
- Wrote SQL queries and performed schema changes and data migrations between production and staging databases on Microsoft SQL Server.
- Managed end-to-end mobile release cycles on a twice-monthly cadence, including testing, debugging, deployment, and maintenance for both Apple App Store and Google Play Store.
- Conducted UI/UX design and feature prototyping using Figma to improve workflow usability and operational efficiency.
- Provided production support, customer issue investigation, and bug fixing for live enterprise retail systems.
- Coordinated requirement gathering, feature planning, testing activities, and implementation timelines across development teams.
- Migrated legacy Ionic application features into a modern Flutter-based architecture.

Programmer **Jul 2024 – Oct 2024**
Aptsys Pte. Ltd. *Singapore*

- Developed Jade2.0, a cross-platform POS ecosystem supporting traditional POS terminals, iPads, handheld Android POS devices, self-order kiosks, and kitchen display systems.
- Enhanced application responsiveness across multiple screen sizes and hardware configurations.
- Collaborated with Android POS hardware suppliers to support new device integrations and deployment compatibility.
- Developed Flutter frontend components and Android-native integrations for POS hardware support and peripheral compatibility.

Software Engineer **Aug 2022 – Mar 2024**
iRadar Sdn. Bhd. *Malacca, Malaysia*

- Developed and maintained GoTani, a smart farming platform integrating drone mapping, IoT sensors, AI-based tree recognition, and hyperspectral imaging technologies.
- Developed backend APIs using Django and implemented frontend/mobile features using Flutter and JavaScript.
- Collaborated with engineering teams on automated irrigation system workflows and farm monitoring solutions.
- Participated in requirement gathering, feature planning, testing, and deployment activities across multiple projects.

PROJECTS

HireMe

- Open-source Claude Skill published on GitHub (v1.0.0) that helps job seekers, including non-technical users, generate tailored cover letters and application emails from a pasted job description.
- Parses uploaded resumes, stores and updates the user's work experience and polished answers to common HR questions, rates job match (Poor / Normal / Good), and answers HR and interview questions.

RetailAIM+

- Developed operational modules supporting workforce scheduling, outlet visits, attendance tracking, AI-assisted product recognition workflows, and retail task execution for 500+ active field staff.
- Implemented Proof of Delivery and order picking systems to improve operational tracking and fulfillment workflows.
- Completed migration of all major legacy application features into the Flutter platform.

R2Home

- Contributed to the design and implementation of a neighbourhood delivery ecosystem integrating promoter workflows with customer-facing commerce applications.
- Developed promoter-side product management workflows enabling daily product image uploads, price updates, and online campaign activation.
- Supported the production launch and onboarding of participating retailers.

Jade2.0

- Improved multi-device usability by transitioning the platform from an iPad-only environment to a responsive multi-platform architecture.
- Implemented dual-screen POS support for enhanced cashier and customer interaction workflows.

GoTani

- Built informative farm analytics dashboards by analyzing operational and sensor data from production databases.
- Revamped UI/UX experiences across web and mobile platforms to improve usability and data visualization.

ERP

- Contributed to the design and implementation of the procurement module in iRadar's internal ERP system, which was later rebranded and sold to a partner company.
- Automated PO and DO generation following management's standard procedures to improve productivity and minimize human error.

TECHNICAL SKILLS

Mobile: Flutter, Dart, Cross-Platform Development, Android-Native Integration, Offline Synchronization, Push Notifications, App Store & Play Store Deployment

Backend & Data: Python, Django, C#, .NET Web API, Entity Framework, RESTful APIs, Microsoft SQL Server, MySQL, Firebase

Web: React, TypeScript, JavaScript, jQuery, HTML5, CSS3, SASS, Responsive UI Development

Tools & AI: Git, AI-Assisted Development (Claude Code, GitHub Copilot), Jira, Trello, Agile Development

Design: Figma, UI/UX Design, Wireframing, Feature Prototyping, User Flow Design

LANGUAGES

Mandarin (Native) | English (Fluent) | Malay (Fluent) | Cantonese (Fluent)

PUBLICATION

Email Plugin Suite for k-Resilient Identity-Based Encryption and Searchable Encryption — CITIC 2022
